Attaching Terrain Painter

There are numerous options to add the component to your terrain.

The first option:

1. Select your terrain in the hierarchy
2. Go to the inspector and click “Add Component”
3. Search for “Terrain Painter”

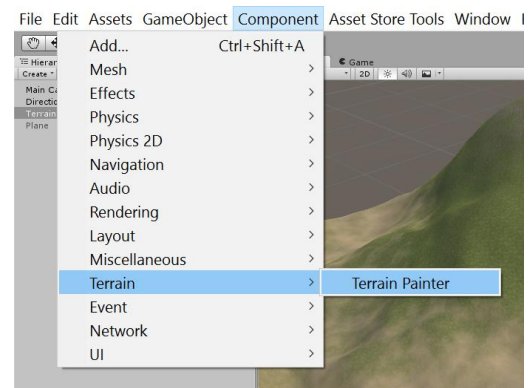

The second option:

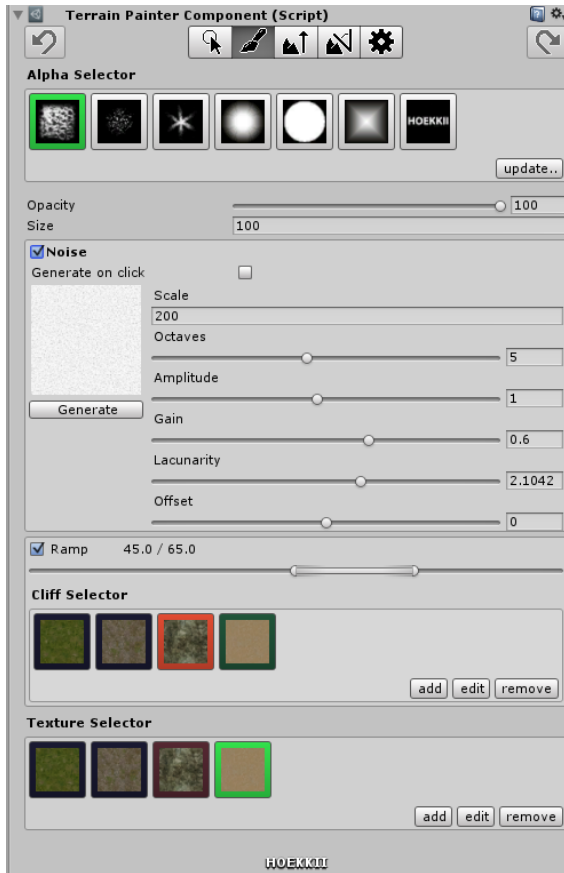

1. Select your terrain in the hierarchy
2. “Component->Terrain->Terrain Painter”

The third option:

1. Go to the “Terrain Painter” folder in the project view
2. Press on the arrow of “TerrainPainter.dll” and drag and drop “TerrainPainterComponent” to your terrain.

Inspector

MAIN TOOLBAR

	Undo	(unavailable)
	One-Click-Paint	(unselected)
	Texture-Brush	(selected)
	Height-Brush	
	Ramp-Brush	
	Settings	
	Redo	

ALPHA SELECTOR

This is for selecting your paint-brush. To add custom brushes follow the instructions;

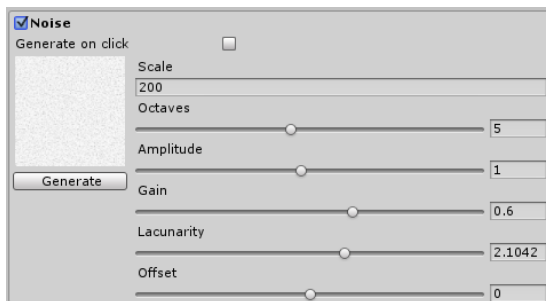

1. Go to the “TPBrushes” folder, located in “Editor Default Resources/TerrainPainter/Brushes/”.
2. Add the new brushes to the folder, with the name convention "Brush_<Brush index starting from 1>".
3. Select the new brushes in Unity, and go to the inspector
4. Change “Texture Type” to “Advanced”
5. Check “Read/Write Enabled”
6. Change “Wrap Mode” to “Clamp”

NOISE

Use the checkbox in the left corner to disable/enable the noise option.

When “Generate on click” is enabled, it will generate a new noise texture everytime you start to paint. When in the “One-Click-Paint” menu, it will generate every time you press “PAINT”.

RAMP

Use the checkbox in the upper-left corner to enable/disable the ramp option

The first value you see is the value when the cliff texture start to being visible. The value on the other side of the forward-slash is the value when the cliff texture is fully visible.

Cliff selector

Color codes:
